Author Index to Volume 28

In this index are listed names of authors and titles of their articles and notes. Abstracts of papers read at meetings are designated by the letter (A) after the number of the page on which the abstract may be found. Those papers that have been publishd only by title are designated by (T). The symbol (L) after an entry signifies a Letter to the Editor.

Achor, William T. Suspended balloon: An empirical deduction of Archimedes' principles—166

Ainslie, D. S. Demonstration equipment for the Herschel divided tube experiment—77

—— Measurement of velocity of sound from resonance in open pipes —167(L)

—— Problems in electrostatics—724

Albert, E. G. Some comments on special programs in physics: 1. "Continental classroom." 2. Visiting scientist program in physics —753(T)

Alexander, R. L. and B. D. Kern. Gamma-ray counting efficiency calibration of a 3- × 3-in. NaI(Ti) scintillation spectrometer—760(A)

Alfvén, H. Cosmical electrodynamics—613

Alpher, R. A. and R. Herman. Tea leaves, Baer's law, and Albert Einstein—748

Alumkal, Anthony. Heavy fragments from excited nuclei—753(T)

Amado, R. D. Review of *The many body problem*—168

Anderson, R. A. Use of punched cards for personal reference files —694

Anderson, Ross H. Electrostatic demonstration apparatus—679

Anderson, Scott. Lecture demonstration of optical properties of thin films of dielectrics and metals—654

Armstrong, H. L. Alternative derivation of some thermodynamic formulas—677

—— Controversy concerning time dilation—504

—— MITAC gyroscope as a classroom model to illustrate the Euler angles—818

—— On the statement of the second law of thermodynamics—564

Arons, Arnold. Review of *The edge of objectivity*—750

Auchter, Harry A. Section news: Wisconsin section—753

Auerbach, Louis. More Christiansen filters—743

Axel, Peter. Review of *Encyclopedic dictionary of electronics and nuclear engineering*—749

Bacon, Ralph Hoyt. Second printing of *Taylor memorial manual*—567

Baez, Albert V. Graphical derivation of the inverse-square law of gravitation from an elliptic orbit and Kepler's law of areas—254

Bainter, Monica. New graduate program for teachers at the state colleges—753(T)

Ball, George (see Schwartz, Manuel)—761(A)

Ballard, Stanley S. (see Primakoff, H.)—576

Barker, Ernest F. Elementary analysis of the gyroscope—808

Barker, J. R. Conducting analogs of a magnetic field—139

Barnes, George. Physics in auto accidents—754(A)

—— Physics in auto accidents—498

—— Section news: Northern-Southern California section—753

Barr, E. Scott. Anniversaries in 1960 of interest to physicists—462

—— Historical survey of the early development of the infrared spectral region—42

Bartlett, Albert A. Review of *College physics*—512

Bass, Chester F. Summer physics programs for gifted students—746

Bender, David. Gravitational perturbation effects on the orbit of a near earth satellite—755(A)

Berenda, Carlton W. Temporal reversal of events in restricted relativity—799

Berry, Richard E. Inexpensive laboratory magnet—759(T)

Bessey, Robert J. Section news: Colorado-Wyoming section—585

Bevc, Vladislav. Electromagnetic field of a ferromagnetic transformer—637

Bitter, F. (see Kemble, E.)—571

—— (see Sears, Francis W.)—568

Blitzer, Leon. Review of *Astronomy*—748

Boas, Mary L. A point of logic—675

Bockstahler, L. Demonstrations in light—758(A)

Boekelheide, I. F. Use of the probability plot in gamma-ray spectroscopy—754

Bondi, H. and C. W. Kilmister. Note on Schiff's paper on relativity—508(L)

Borg, S. F. Similarity solutions in fluid-gas dynamics—336

Bradbury, Ted Clay, Relativistic theory of the behavior of clocks —443

Bradley, George E. Demonstration beta spectrometer—165

—— Review of *Quantum electronics—a symposium*—682

—— Simple parallel plate ionization chamber for the undergraduate nuclear physics laboratory—163

Bridgman, P. W. Review of *On understanding physics*—582

—— Review of *Thermodynamics*—684

Brill, Dieter R. (see Werner, Frederick G.)—126

Brody, Selma. Sophomore laboratory course in modern physics—736

Brooks, H. (see Kemble, E.)—571

Brown, G. Burniston. Gravitational and inertial mass—475

—— Reply to Lustig's Comments—820

Brown, Sanborn C. Report of the treasurer—606

Brown, Sheldon. Projection demonstration—freezing by evaporation —754(A)

Brown, William Fuller, Jr. Single-domain particles: New uses of old theorems—542

Buchdahl, H. A. Concepts of classical thermodynamics—196

Burckle, J. C. and M. Schwartz. Electrical conductivity of semiconducting crystals as a function of pressure—761(T)

Burkhardt, Hugh. Elementary-particle physics—202

Burns, Stephen H. and Myron A. Jeppesen. Photographing and projecting crystal patterns to convergent polarized light—777

Burton, William S. Review of *Horns, strings and harmony*—821

Busse, W. F. and F. C. Starr. Change of a viscoelastic sphere to a torus by random impacts—19

Carleton, Robert N. Review of *Echoes of bats and men*—294

Carr, Herman Y. and Robert L. Sells. Electromagnetic waves in an introductory physics course—727

Carr, Percy H., Robert M. Stewart, Jr., and Joseph N. Senne. Flash period of 1958 Delta I—64

Caughey, T. K. Hula hoop: Example of heteroparamagnetic excitation—104

Chapman, Seville. Misconception concerning the dynamics of the impact ball apparatus—705

Chen, Henry S. C. Note on a new design for the centripetal force apparatus—377

Christy, R. W. Electrical conductivity and thermoelectric power in ionic crystals—457

—— (see Dewdney, John W.)—399

—— **and W. P. Davis, Jr.** Optical-electrical tachometer—563

—— Power supply for the *e/m* experiment—815

Clark, David D. Review of *Nucleonics fundamentals*—513

Cole, Richard W. How fundamentals can be recognized—758(A)

—— Section news: Western Pennsylvania section—757

Cooper, C. Burleigh. Rubber model for demonstration and laboratory experiments—644

Cooper, Leon N. Theory of superconductivity—91

Cram, Winston. Review of *The challenge of science education*—683

Crane, H. R. Creative thinking and experimenting—437

Crawford, Roger C. (see Hilton, Wallace A.)—743

Cross, Judson B. Review of *Great experiments in physics*—581

Curl, R. F., Jr., and John E. Kilpatrick. Atomic term symbols by group theory—357

Dardis, J. G. Magnetic quadrupole lens calculation—760(A)

Davidon, William C. Review of *The theory of elementary particles* —410

Davidson, J. P. Erratum: Isotopic spin—103
Davis, J. R. Prebreakdown pulses in stibnite—762(A)
Davis, William P., Jr. Rate meter construction project—559
—— (see Christy, R. W.)—563
—— (see Christy, R. W.)—815
Day, John A. Report on a gifted student program at Linfield College—80(L)
Dayton, Irving E. Review of *Taylor manual of advanced undergraduate experiments in physics*—579
DeBenedetti, S. Mössbauer effect—758(T)
Dennis, Warren H. (see Miller, Donald G.)—796
Desloge, Edward A. and Steven W. Matthysse. Collision term in the Boltzmann equation—1
Dewdney, John W. Energy loss from the filament of an incandescent lamp—89
—— Graphical method for comparing galvanometer sensitivities—450
—— Relativistic relations between mass, velocity, momentum, and kinetic energy—562
—— Undergraduate mass spectrometer—452
—— **and Robert W. Christy.** Nonsecret laboratory examinations—399
de Zafra, Robert L. Optical pumping—646
Dicke, R. H. Eötvös experiment and the gravitational red shift—344
Dietrich, Frank S. Erratum: Subcritical reactor as a college facility—567
—— Subcritical reactor as a college facility—309
Dillinger, J. R. Report on three national conferences on the improvement of college physics courses—753(T)
Dobbs, E. Roland. Is there an ideal crystal?—243
Dodd, Laurence E. Review of *Mechanics, wave motion and heat*—81
Donnally, Bailey. Nuclear magnetic resonance detector suitable for undergraduate demonstrations and laboratories—412(A)
Doran, G. A. Electronically maintained tuning fork for use by students—505
DuBridge, Lee A. Fun in space—719
du Sault, Lucille. Review of *Glossary of words and phrases used in radiology and nuclear medicine*—822

Emrich, Raymond J. Modern problems in fluid dynamics—759(A)
—— Review of *Physics for students of science and engineering*—820
Eno, Ralph. An undergraduate Planck's constant experiment—754(A)
Epstein, Saul T. Application of the Rayleigh-Schrödinger perturbation theory to the delta function potential—495
Erich, Lester C. Section news: Central Pennsylvania section—760
Estin, Robert. Report on the visiting scientists program in Chicago—413(T)
Evett, Arthur A. and D. C. Fried. Speed of light in flowing dispersive liquids—733
—— **and Roald K. Wangsness.** Note on the separation of relativistically moving rockets—566

Fano, U. Review of *Group theory and its application to the quantum mechanics of atomic spectra*—408
Feenberg, Eugene. Orbit to the sun—497
—— Inertia of energy—565
Ferrell, Richard A. Electron-nucleum hyperfine interaction in atoms—484
Ferris, Frederick L., Jr. Testing for physics achievement—269

Zacharias, Jerrold R. (see Sears, Francis W.)—568
Zemansky, Mark W. (see Primakoff, H.)—576
Zickel, T. A. and M. Schwartz. Hall effect of semiconducting crystals as a function of pressure—761(T)
Zorn, E. A. (see Zorn, J. C.)—676
Zorn, J. C. and E. A. Zorn. A model for atomic wave functions—676

Analytic Subject Index to Volume 28

In this index are listed titles of articles and notes, together with the names of their authors. Classification is based upon analyses of contents of the articles, rather than upon titles alone. The symbol (A) designates an abstract of a paper read at a meeting; (T) signifies title only, and (L) designates a Letter to the Editor.

To facilitate reference to any desired subject, this index is divided into sections arranged alphabetically. The titles of these sections are as follows:

Accelerators
Acoustics (see Sound)
Aerophysics
American Association of Physics Teachers
Apparatus, demonstration
Apparatus, general
Apparatus, laboratory
Astrophysics
Biophysics
Books
Cosmic rays
Courses
Demonstrations
Department administration, maintenance, and activities
Education, physics, and science
Electricity and magnetism
Electronics
Employment of physicists
Experiments
General physics, educational aspects
General physics, instructional techniques
Geophysics
Governmental and industrial research
Heat and thermodynamics
History and biography
Laboratory arts and techniques
Laboratory organization and operation
Light
Mathematics
Mechanics, classical
Mechanics, quantum
Mechanics, statistical
Microwaves
Modern physics
Nuclear physics
Optics (see Light)
Particles, elementary
Philosophy of science
Plasma physics
Properties of matter
Reactors
Relativity
Reports, announcements, and news
Rockets
Satellites
Secondary school physics
Social and economic aspects of science
Solid-state physics
Sound
Space physics
Teacher training
Testing, theory and techniques
Textbooks (see Books)
Units, dimensions and terminology
Visual materials and methods
X-rays

Aerophysics

Atmospheric optics, John E. Ivory—412(A)
Modern problems in fluid dynamics, Raymond J. Emrich—000(A)

AAPT

The AAPT in a new era, Leonard O. Olsen—533
American Association of Physics Teachers committee structure, Leonard O. Olsen—600
Conference on college physics, C. J. Overbeck—759(A)
Discovery of interference by Thomas Young, Robert W. Pohl—530
Future meetings—496
Future meetings—567
Minutes of the annual meeting of the council, January 28, 1960, Frank Verbrugge—602
Minutes of the annual meeting, January 30, 1960, Frank Verbrugge—604
New members of the association—83
New members of the association—170
New members of the association—297
New members of the association—413
New members of the association—518
New members of the association—586
New members of the association—685
New members of the association—762
New members of the association—823
Notice of monthly issue of *American Journal of Physics*—726
Presentation of physics in the setting of other studies, Gerald Holton—577
Proceedings of the Association twenty-ninth annual meeting, Leonard O. Olsen—590
Publication charge increase, Walter C. Michels—658
Report of a conference on the improvement of college physics courses, Francis W. Sears, Francis Bitter, Francis L. Friedman, Walter C. Michels, Frank Verbrugge, and Jerrold R. Zacharias—568
Report of the committee on aims, E. Kemble, F. Bitter, H. Brooks, G. Holton, E. Rogers, and W. Scott—571
Report of the editor for 1959, Walter C. Michels—605
Report of the treasurer, Sanborn C. Brown—606
Robert Wichard Pohl: Oersted medalist for 1959, C. J. Overbeck—528
Sample list of monograph topics, Henry Primakoff, Stanley S. Ballard, Melba Phillips, Byron L. Youtz, and Mark W. Zemansky—576
Second printing of *Taylor memorial manual*, Ralph Hoyt Bacon—567
Section news: Central Pennsylvania section, Lester C. Erich—760
Section news: Chicago section, Richard T. O'Connor—412
Section news: Chicago section, R. T. O'Connor—758
Section news: Colorado-Wyoming section, Robert J. Bessey—585
Section news: Indiana section, Earl Friesen—755
Section news: Kentucky section, Richard Hanau—760
Section news: Minnesota section, George R. Stubbs—411
Section news: Northern-Southern California section, George Barnes—753
Section news: Oregon section, Byron L. Youtz—584
Section news: Western Pennsylvania section, Richard W. Cole—757
Section news: Wisconsin section, Harry A. Auchter—753
Statements of editorial policy—76
Wesleyan conference on demonstration lectures, Ralph Winch—539

Apparatus, demonstration

Another hydrostatic paradox, S. W. Leifson—557
Apparatus drawings project. Simple kinetic theory demonstration, Robert G. Marcley—666
Apparatus review: Projecto-lab, Marathon E. High—814
Arago's disk demonstration, Julius Sumner Miller—748
Cardboard gyro for demonstrating precession motion, Lloyd B. Ham and Paul C. Sharrah—504
The case of the counting balls, John V. Kline—102
$C = i/(dv/dt)$ demonstrator, Harry E. Stockman—675
Chemical heart demonstration as a dynamic nucleus model, Glenn F. Powers and Joseph E. Smith—561
Demonstration beta spectrometer, George E. Bradley—165
Demonstration equipment for the Herschel divided tube experiment, D. S. Ainslie—77
Demonstration of energy conservation in an inelastic collision, Francis W. Sears—679
Demonstration of hydrodynamic flow, R. Edwin Worley—165
Demonstration of the harmonic content of a square wave, F. H. Mitchell, R. N. Whitehurst, and Earl LeCroy—405(L)
Electrostatic demonstration apparatus, Ross H. Anderson—679
Extension of an angular momentum demonstration, John V. Kline—405(L)
Gyroscope, Harry F. Newhall—78
Interesting array of simple demonstrations quickly done, Julius Sumner Miller—755(T)

Interesting demonstration of induced emf, Julius Sumner Miller—81(L)
Interesting extension of the kaleidoscope, Julius Sumner Miller—80(L)
Laboratory experiments in motional electric fields, John W. Then—557
Lecture demonstration notes available—374
Lecture demonstration of optical properties of thin films of dielectrics and metals, Scott Anderson—654
MITAC gyroscope as a classroom model to illustrate the Euler angles, H. L. Armstrong—818
Model for atomic wavefunctions, J. C. Zorn and E. A. Zorn—676
Nuclear magnetic resonance detector suitable for undergradute demonstrations and laboratories, Bailey Donnally—412(A)
Pendulum parametric amplifier, Harry E. Stockman—506
Photographing and projecting crystal patterns in convergent polarized light, Stephen H. Burns and Myron A. Jeppesen—774
Power supply for the e/m experiment, R. W. Christy and W. P. Davis, Jr.—815
Projection demonstration. Freezing by evaporation, Sheldon Brown—754(A)
Remarks on the Wesleyan conference on demonstration physics apparatus, Harald C. Jensen—413(T)
Rubber model for demonstrations and laboratory experiments, C. Burleigh Cooper—644
Simple parallel-plate ionization chamber for the undergraduate nuclear physics laboratory, George E. Bradley—163
Some "friction-free" demonstrations, D. D. Snyder and H. D. Nine—76
An unmixing demonstration, John P. Heller—348

Apparatus, general

Apparatus notes. A new feature—567
Device for supporting loaded wires, Julius Sumner Miller—404(L)
Erratum: Subcritical reactor as a college facility, Frank S. Dietrich—567
Introduction to apparatus drawings, W. C. Kelly—33
More Christiansen filters, Louis Auerbach—743
More effective teaching of physics through television, Harvey E. White—368
New high-vacuum technique: Kits to be used by students to make vacuum tubes, J. H. Owen Harris—698
Subcritical reactor as a college facility, Frank S. Dietrich—309
Use of punched cards for personal reference files, R. A. Anderson—694

Apparatus, laboratory

Apparatus drawings project. Air-suspended pucks for momentum experiments, Robert G. Marcley—670
Apparatus drawings project. Air suspension apparatus for measuring the resolution of forces, Robert G. Marcley—259
Apparatus drawings project. Air suspension gyroscope, Robert G. Marcley—150
Apparatus drawings project. Balmer series spectrum tube, Robert G. Marcley—35
Apparatus drawings project. Bragg diffraction apparatus, Robert G. Marcley—415
Apparatus drawings project. Driven linear mechanical oscillator, Robert G. Marcley—534
Apparatus drawings project. Magnetic field of a circular coil, Robert G. Marcley—147
Apparatus drawings project. Small mass spectrometer, Robert G. Marcley—380
Apparatus drawings project. Versatile mass spectrometer, Robert G. Marcley—418
Apparatus review: Welch centripetal force apparatus, Arthur G. Rouse—561
Conversion of a household electric clock into a reliable stopwatch, Edward H. Green—507
Demonstration beta spectrometer, George E. Bradley—165
Electronically maintained tuning fork for use by students, G. A. Doran—505
Electronic ballistic galvanometer, L. Marinaccio and Leroy Mason 757(A)
Erratum: Subcritical reactor as a college facility, Frank S. Dietrich—567
Experimental self-plotting of trajectories, Richard Sutton—805
Experiments in x-ray physics using a commercial x-ray spectrometer, Leonard Muldawer—811
Experiments on capacitance for the undergraduate laboratory, Robert A. Sander—755(T)
Gyroscope, Harry F. Newhall—78
Half-life of a water column as a laboratory exercise in exponential decay, J. R. Smithson and E. R. Pinkston—740
Inexpensive laboratory magnet, Richard E. Berry—759(T)
Mechanical equivalent of heat apparatus, John McLeod and Albert E. Werbrouck—793
Note on a new design for the centripetal force apparatus, Henry S. C. Chen—377
Nuclear electronics, Joseph P. Harper—760(A)
Nuclear magnetic resonance detector suitable for undergraduate demonstrations and laboratories, Bailey Donnally—412(A)
Optical-electrical tachometer, R. W. Christy and W. P. Davis, Jr.—559
Optical pumping, Robert L. de Zafra—646
Physics of the yo-yo. New laboratory experiment, Harold C. Jensen 758(A)
Porosity-measurement apparatus, F. B. Stumpf and F. J. Lukman—503
Practical and theoretical aspects of a compound pendulum, Michael Svonavec—413(A)
Rate-meter construction project, William P. Davis, Jr.—559
Reprints of apparatus reviews—449
Simple electronic clock for the study of freely-falling bodies, G. Giacomelli—817
Simple method for measuring B, Albert J. Read—745
Simple parallel plate ionization chamber for the undergraduate nuclear physics laboratory, George E. Bradley—163
Some laboratory aids and devices, Frank G. Karioris—753(A)
Subcritical reactor as a college facility, Frank S. Dietrich—309
Undergraduate Planck's constant experiment, Ralph Eno—754(A)
X-ray diffraction apparatus for the undergraduate laboratory, John Kalafut—759(A)

Astrophysics

Cosmical electrodynamics, H. Alfvén—613
Electromagnetic radiation from extra terrestrial sources, Herbert Friedman—622
Space science symposium, S. F. Singer—612
Surface conditions on the nearest planets, E. J. Opik—618

Biophysics

Biophysics in the medical curriculum, James E. Randall—801
Notes on fast transfer reactions now available—798

Books

Book review: *Advances in spectroscopy, Volume 1*, edited by H. W. Thompson, A. G. Shenstone—579
Book review: *Astronomy* by Theodore G. Mehlin, Leon Blitzer—748
Book review: *A history of science, technology and philosophy in the 16th and 17th centuries* by A. Wolf, Alfred Romer—752
Book review: *Basic physics for secondary schools* by Howard A. Eubank, John M. Ramsay, and Leslie A. Rickard, Frederick W. Swan—294
Book review: *Biophysical science: A study program* by J. L. Oncley, Editor-in-Chief, F. O. Schmitt, R. C. Williams, M. D. Rosenberg, R. H. Bolt, and R. B. Setlow—751
Book review: *College physics* by Robert T. Beyer and A. O. Williams, Albert A. Bartlett—512
Book review: *College physics* by Franklin Miller, Noel C. Little—168
Book review: *Echoes of bats and men* by Donald R. Griffin, Robert N. Carleton—294

Book review: *Electric circuit theory* by F. A. Benson and D. Harrison, Ralph Winch—680
Book review: *Encyclopedic dictionary of electronics and nuclear engineering*, by Robert I. Sarbacher, Peter Axel—749
Book review: *Glossary of words and phrases used in radiology and nuclear medicine*, Lucille du Sault—822
Book review: *Great experiments in physics* edited by Morris H. Shamos, Judson B. Cross—581
Book review: *Group theory and its application to the quantum mechanics of atomic spectra* by E. P. Wigner, U. Fano—408
Book review: *Horns, strings and harmony* by Arthur H. Benade, William S. Burton—821
Book review: *How old is the earth?* by Patrick M. Hurley, Edward H. Watson—296
Book review: *Laboratory performance tests for general physics* by H. Kruglak and C. N. Wall, C. J. Overbeck—583
Book review: *Magnets: The education of a physicist* by F. Bitter, Thomas R. Glover—295
Book review: *Manual on rockets and satellites. Volume VI of Annals of the international geophysical year* edited by L. V. Berkner, Henry Richter—170
Book review: *Masers* by J. R. Singer, James W. Meyer—408
Book review: *Mechanics, wave motion and heat* by Francis Weston Sears, Laurence E. Dodd—81
Book review: *Mecanique quantique, Vol. 2*, by Albert Messiah, F. Villars—580
Book review: *Nucleonics fundamentals* by David B. Nosington, David D. Clark—513
Book review: *On understanding physics* by W. H. Watson, P. W. Bridgman—582
Book review: *Paris symposium on radio astronomy* edited by Ronald N. Bracewell, Donald B. Harris—511
Book review: *Philosophy of atomic physics* by J. Mudry, Norwood Russell Hanson—410
Book review: *Physics for students of science and engineering* by Robert Resnick and David Halliday, Raymond J. Emrich—820
Book review: *Physics in your high school* (by) American Institute of Physics, Howard Laster—509
Book review: *Physics of the atom* by M. Russell Wehr and James A. Richards, Jr., F. W. Van Name, Jr.—582
Book review: *Principles of college physics* by George Shortley and Dudley Williams, R. A. Goodwin—169
Book review: *Principles of modern physics* by Robert B. Leighton, W. H. Furry—510
Book review: *Quantum electronics—a symposium* edited by C. H. Townes, George Bradley—682
Book review: *Radioactivity measuring instruments* by M. C. Nokes, Sherman Frankel—295
Book review: *Russian for the scientist* by John Turkevich and Ludmilla B. Turkevich, G. M. Volkoff—409
Book review: *Soap bubbles (and the forces which mold them)* by C. V. Boys, Charles Smith—296
Book review: *The birth of a new physics* by Alfred Romer—822
Book review: *The challenge of science education* by Joseph S. Roucek, S. Winston Cram—683
Book review: *The edge of objectivity* by Charles Coulston Gillispie, Arnold Arons—750
Book review: *The many body problem* edited by C. DeWitt, R. D. Amado—168
Book review: *The physicist's conception of nature* by Werner Heisenberg, David Hawkins—83
Book review: *The physics of electricity and magnetism* by William Taussig Scott, Hugh Wolfe—681
Book review: *Thermodynamics* by Herbert B. Callen, P. W. Bridgman—684
Book review: *The Taylor manual of advanced undergraduate laboratory experiments in physics* edited by Thomas E. Brown, Irving E. Dayton—579
Book review: *The theory of elementary particles* by James Hamilton, William C. Davidon—410
Book review: *Thermodynamics* by Gordon J. Van Wylen, Robert L. Weber—410
Post-use book reviews—424

Cosmic rays

Cosmic radiation, Livio Scarsi—213

Courses

Biophysics in the medical curriculum, James E. Randall—801
Conference on college physics, C. J. Overbeck—759(A)
Course in physics for students of architecture, Charles Williamson—302
Report on three national conferences on the improvement of college physics courses, J. R. Dillinger—753(T)
Secondary school physics: The Physical Science Study Committee, Gilbert C. Finlay—286

Demonstrations

Interesting array of sample demonstrations quickly done, Julius Sumner Miller—755
Two startling demonstrations with a magnet, R. Stuart Mackay—678

Editorials

The AAPT in a new era, Leonard O. Olsen—533

Education, physics and science

Advanced placement program in physics, Kenneth H. Moore—279
Biophysics in the medical curriculum, James E. Randall—801
Conference on college physics, C. J. Overbeck—759(A)
Content of high school physics courses, Bryan Swan, James Lucus, Edwin Schillinger, and Edward McNeil—759(A)
Course in physics for students of architecture, Charles Williamson—302
Creative thinking and experimenting, H. R. Crane—437
Graduate degrees by summer study, Walter Thumm—819
A look at the "Continental Classroom," Robert H. Randall—263
On the education of physicists in three foreign countries, Albert M. Goldfarb—179
Presentation of physics in the setting of other studies, Gerald Holton—577
Report of conference on the improvement of college physics courses, Francis W. Sears, Francis Bitter, Francis L. Friedman, Walter C. Michels, Frank Verbrugge, and Jerrold R. Zacharias—568
Report on a gifted student program at Linfield College, John A. Day—80(L)
Report on the visiting scientists program in the Chicago area, Robert Estin—759(T)
Role of physics in revision of engineering curricula, V. L. Parsegian—134
Sample list of monograph topics, Henry Primakoff, Stanley S. Ballard, Melba Phillips, Byron L. Youtz, and Mark W. Zemansky—576
Visiting foreign staff project (V.F.S.P.) at Temple University, Elmer L. Offenbacher—173

Electricity and magnetism

Apparatus drawings project. Magnetic field of a circular coil, Robert G. Marcley—147
$C = i/(dv/dt)$ demonstrator, Harry Stockman—675
Classical interaction of an electric charge with a magnetic monopole, I. Richard Lapidus and Jerry L. Pietenpol—17
Conducting analogs of a magnetic field, J. R. Barker—139
Consistent symbols in circuit diagrams, Francis T. Worrell—508(L)
Cosmical electrodynamics, H. Alfvén—613
Derivation of the speed of electromagnetic waves in terms of dielectric constant, magnetic permeability, and ratio of charge units, Frederick G. Werner and Dieter R. Brill—126
Electromagnetic field of a ferromagnetic transformer, Vladislav Bevc—637
Electromagnetic waves in an introductory physics course, Herman Y. Carr and Robert L. Sells—727
Electron-nucleus hyperfine interaction in atoms, Richard A. Ferrell—484
Electronics for freshmen before ac circuit theory, P. I. Kingsbury and E. F. Taylor—163
Elementary considerations on the dynamics of light waves, G. Györgri—85

Elementary electricity experiment involving measurement and synthesis, Wesley R. Smith—144
Energy loss from the filament of an incandescent lamp, John W. Dewdney—89
Experiments on capacitance for the undergraduate laboratory, Robert A. Sander—755(T)
Graphical method for comparing galvanometer sensitivities, John W. Dewdney—450
Graphical representation of some electrical potential fields, Roland L. Heid—112
Inexpensive laboratory magnet, Richard E. Berry—759(T)
Interesting demonstration of induced emf, Julius Sumner Miller—81(L)
Laboratory experiments in motional electric fields, John W. Then—557
Magnetic quadrupole lens calculation, J. G. Dardis—760(A)
Magnetically coupled oscillating system, Fidel Alsine Fuertes—744
Magnetism through dipoles, Francis T. Worrell—753(A)
Note on force per unit charge, Francis T. Worrell—406(L)
Pendulum parametric amplifier, Harry E. Stockman—506
Phase production and measurement from 0 to 2π, J. B. Hart, F. X. Haas, and G. M. Hofmeyer—537
Problems in electrostatics, D. A. Ainslie—724
Rubber model for demonstrations and laboratory experiments, C. Burleigh Cooper—644
Self-energy and stability of the classical electron, F. Rohrlich—639
Sex and electrostatics, D. Craig Gillespie—754(A)
Simple method for measuring B, Albert J. Read—745
Single-domain particles: New uses of old theorems, William Fuller Brown, Jr.—542
Two startling demonstrations with a magnet, R. Stuart Mackay—678

Electronics

Contribution of Thomas A. Edison to thermionics, J. B. Johnson—763
Demonstration of the harmonic content of a square wave, F. H. Mitchell, R. N. Whitehurst, and Earl LeCroy—405(L)
Electronic ballistic galvanometer, L. Marinaccio and Leroy Mason 757(A)
Electronics for freshmen before ac circuit theory, P. I. Kingsbury and E. F. Taylor—163
Electrostatic demonstration apparatus, Ross H. Anderson—679
Nuclear electronics, Joseph P. Harper—760(A)
Nuclear magnetic resonance detector suitable for undergraduate demonstrations and laboratories, Bailey Donnally—412(A)
Operation moon bounce, David R. Light—759(A)
Rate meter construction project, William P. Davis, Jr.—559

Employment of physicists

Health physics, Wesley Winter—412(A)

Experiments

Apparatus review: Welch centripetal force apparatus, Arthur G. Rouse—561
Conducting analogs of a magnetic field, J. R. Barker—139
Electronics for freshmen before ac circuit theory, P. I. Kingsbury and E. F. Taylor—163
Elementary electricity experiment involving measurement and synthesis, Wesley R. Smith—144
Energy loss from the filament of an incandescent lamp, John W. Dewdney—89
Erratum: Simple experiment in ultrasonics, Harold Forstat—567
Experimental self-plotting of trajectories, Richard Sutton—805
Graphical representation of some electrical potential fields, Roland L. Heid—112
Laboratory problem for students in intermediate optics, Elizabeth R. Tuttle and John G. Pierce—814
Measurement of half-life, Wallace A. Hilton and Roger C. Crawford—743
Measurement of velocity of sound from resonance in open pipes, D. S. Ainslie—167(L)
Mechanical equivalent of heat apparatus, John McLeod and Albert E. Werbrouch—793
Nuclear physics laboratory, Howard C. Long—759(A)
Oscilloscope spectroscopy, J. Giordano and M. Natapoff—502
Problems in electrostatics, D. S. Ainslie—724
Simple method of determining the thickness or the refractive index of thin films, K. V. Krishna Rao—447
Student determination of g to five significant figures, R. J. Henry—755(T)
Study of Compton backscattering from materials with varying atomic numbers, Kenneth LaBaw—754(A)
Suspended balloon: Empirical deduction of Archimedes' principle, William T. Achor—166
Undergraduate mass spectrometer, John W. Dewdney—452

General physics, educational aspects

Course in physics for students of architecture, Charles Williamson—302
Current teaching practices and problems in the general physics laboratory, Haym Kruglak—791
Health physics, Wesley Winter—412(A)
Hieroglyphics in physics, Richard C. Hitchcock—758(A)
How fundamentals can be recognized, Richard W. Cole—758(A)
MITAC gyroscope as a classroom model to illustrate the Euler angles, H. L. Armstrong—818
NSF accelerated summer physics program at St. Olaf College, Peter Fossum—412(T)
National science foundation sponsored summer program in science and mathematics for high school students, Robert H. Frost—754(A)
New graduate program for teachers at the state colleges, Monica Bainter—753(T)
On teaching the philosophy of physics, Raymond J. Seeger—384
On the education of physicists in three foreign countries, Albert M. Goldfarb—179
On the rationale of lecture demonstrations, Harold K. Schilling—306
Purdue film experiment, D. J. Tendam—755(T)
Report of a conference on the improvement of college physics courses, Francis W. Sears, Francis Bitter, Francis L. Friedman, Walter C. Michels, Frank Verbrugge, and Jerrold R. Zacharias—568
Report of the committee on aims, E. Kemble, F. Bitter, H. Brooks, G. Holton, E. Rogers, and W. Scott—571
Report on the visiting scientists program in Chicago, Robert Estin—413(T)
Revision of elementary physics courses, J. M. Fowler—755(T)
Role of physics in revision of engineering curricula, V. L. Parsegian—134
Some comments on special programs in physics: 1. "Continental Classroom." 2. Visiting scientist program in physics. E. G. Albert—753(T)
Summer physics program for gifted students, Chester F. Bass—746
Undergraduate research at Earlham, D. Telfair—755(T)
What do graduate schools want, expect, and get in the backgrounds of beginning graduate students? D. J. Tendam, J. M. Fowler, and M. Ross—755(T)

General physics, instructional techniques

Cartoons and physics instruction, Julius Sumner Miller—407(L)
Couple in general physics, John B. Hart—819
Electromagnetic waves in an introductory physics course, Herman Y. Carr and Robert L. Sells—727
Elementary view of two central-force problems, Jarvis Todd—754(A)
Error analysis in the introductory physics laboratory, Dario Moreno—786
Gradient give-away game, John B. Hart—747
Graphical derivation of the inverse-square law of gravitation from an elliptic orbit and Kepler's law of areas, Albert V. Baez—254
It is important to know what questions to ask, Julius Sumner Miller—38
A look at the "Continental Classroom," Robert H. Randall—263
Magnetism through dipoles, Francis T. Worrell—753(A)
Money analogies in the physical sciences, Leonard Muldawer—404(L)

More effective teaching of physics through television, Harvey E. White—368
Secondary school physics: The Physical Science Study Committee, Gilbert C. Finlay—286
Testing for physics achievement, Frederick L. Ferris, Jr.—269
Sex and electrostatics, D. Craig Gillespie—754(A)
Wesleyan conference on demonstration lectures, Ralph Winch—539

Geophysics
Natural radioactivity of Miami soils, D. Telfair and Carl W. Smith—755(T)

Heat and thermodynamics
Alternative derivation of some thermodynamic formulae, H. L. Armstrong—677
Concepts of classical thermodynamics, H. A. Buchdahl—196
Definition of the perfect gas and its relation to the second law of thermodynamics, Donald G. Miller and Warren H. Dennis—796
Deviations from equipartition of energy with nonquadriatic Hamiltonian, Anton Peterlin—716
Distinction between quasi-static processes and reversibility, John S. Thomsen—564
Experiment in thermoelectricity II, William H. Lucke—563
Energy loss from the filament of an incandescent lamp, John W. Dewdney—89
Further comment on the interrelationship of physical quantities, K. G. McNeill—744
Mechanical equivalent of heat apparatus, John McLeod and Albert E. Werbrouck—793
On the statement of the second law of thermodynamics, H. L. Armstrong—564
A point of logic, Mary L. Boas—675
Simplification of Caratheodory's treatment of thermodynamics, Louis A. Turner—781
Thermodynamics of an irreversible quasi-static process, John S. Thomsen—119
Well-informed heat engine: Efficiency and maximum power, C. Finfgeld and S. Machlup—324

History and biography
Anniversaries in 1960 of interest to physicists, E. Scott Barr—462
Contribution of Thomas A. Edison to thermionics, J. B. Johnson—763
Discovery of interference by Thomas Young, Robert W. Pohl—530
The education of an American scientist: H. A. Rowland, 1848–1901, Samuel Rezneck—155
Gravitational and inertial mass, G. Burniston Brown—475
Historical survey of the early development of the infrared spectral region, E. Scott Barr—42
On the origins of the special theory of relativity, Gerald Holton—627
Physicists on postage stamps, O. S. Leifson—754(A)
Tea leaves, Baer's law, and Albert Einstein, R. A. Alpher and R. Herman—748
What are the circumstances of scientific discovery? Charles Williamson—758

Laboratory arts and techniques
Conversion of a household electric clock into a reliable stopwatch, Edward H. Green—507
Device for supporting loaded wires, Julius Sumner Miller—404(L)
Graphical method for comparing galvanometer sensitivities, John W. Dewdney—450
New high vacuum technique: Kits to be used by students to make vacuum tubes, J. H. Owen Harries—698

Laboratory organization and operation
Nonsecret laboratory examinations, John W. Dewdney and Robert W. Christy—399
Sophomore laboratory course in modern physics, Selma Brody—736

Light
Apparatus drawings project. Balmer series spectrum tube, Robert G. Marcley—35
Apparatus drawing project. Bragg diffraction apparatus, Robert G. Marcley—415
Atmospheric optics, John E. Ivory—412(A)
Demonstrations in light, L. Bockstahler—758(A)
Derivation of the speed of electromagnetic waves in terms of dielectric constant, magnetic permeability, and ratio of charge units, Frederick G. Werner and Dieter R. Brill—126
Discovery of interference by Thomas Young, Robert W. Pohl—530
Effects of gamma radiation on infrared detectors, John F. Ready—411(A)
Electromagnetic radiation from extra terrestrial sources, Herbert Friedman—622
Elementary diffraction theory of zone plates, Milton Sussman—394
Historical survey of the early development of the infrared spectral region, E. Scott Barr—42
Influence of the environment on the wave transmission of energy: Resonance and relaxation, R. B. Lindsay—67
Infrared detectors, Paul W. Kruse—411(A)
Interesting extension of the kaleidoscope, Julius Sumner Miller—80(L)
Laboratory problem for students in intermediate optics, Elizabeth R. Tuttle and John G. Pierce—814
Lecture demonstration of optical properties of thin films of dielectrics and metals, Scott Anderson—654
Molecular structure symposium—393
More Christiansen filters, Louis Auerbach—743
Number of images produced by multiple reflection, V. M. Kulkarni—317
On the validity of Kirchoff's law for a freely radiating body, M. A. Weinstein—123
Optical pumping, Robert L. de Zafra—646
Oscilloscope spectroscopy, J. Giordano and M. Natapoff—502
Photographing and projecting crystal patterns in convergent polarized light, Stephen H. Burns and Myron A. Jeppesen—774
Radiation pressure on a rapidly moving surface, Richard Schlegel—687
Simple method of determining the thickness or the refractive index of thin films, K. V. Krishna Rao—447
Speed of light in flowing dispersive liquids, Arthur A. Evett and D. C. Fried—733

Mathematics
Atomic term symbols by group theory, R. F. Curl, Jr. and John E. Kilpatrick—357
Extending the Lorentz transformation by characteristic coordinates, Robert T. Jones—109
Method of virtual work for some problems in physics, Surendra Nath Swivastava—299
Momentum space representation and photodisintegration of the deuteron, Kiu S. Suh—327
Simple derivation of the Clebsch-Gordan coefficients, R. T. Sharp—116

Mechanics, classical
Another hydrostatic paradox, S. W. Leifson—557
Apparatus drawings project. Air-suspended pucks for momentum experiments, Robert G. Marcley—670
Apparatus drawings project. Air suspension gyroscope, Robert G. Marcley—150
Apparatus drawings project. Driven linear mechanical oscillator, Robert G. Marcley—534
Apparatus review: Welch centripetal force apparatus, Arthur G. Rouse—561
Basic physics concepts involved in nuclear interactions, James Roberts—758(A)
Cardboard gyro for demonstrating precessional motion, Lloyd G. Ham and Paul C. Sharrah—504
The case of the counting balls, John V. Kline—102
Classical interaction of an electric charge with a magnetic monopole, I. Richard Lapidus and Jerry L. Pietenpol—17

Concerning the classical interaction of an electric charge with a magnetic monopole, Gerard Nadeau—566
Cosmical electrodynamics, H. Alfvén—613
Couple in general physics, John B. Hart—819
Demonstration of energy conservation in an inelastic collision, Francis W. Sears—679
Demonstration of hydrodynamic flow, R. Edwin Worley—165
Elementary analysis of the gyroscope, Ernest F. Barker—808
Elementary considerations on the dynamics of light waves, G. Györgyi—85
Elementary view of two central-force problems, Jarvis Todd—754(A)
Experimental self-plotting of trajectories, Richard Sutton—805
Extension of an angular momentum demonstration, John V. Kline—405(L)
Fluid column, Blake D. Mills, Jr.—353
Graphical derivation of the inverse-square law of gravitation from an elliptic orbit and Kepler's law of areas, Albert V. Baez—254
Gravitational and inertial mass, G. Burniston Brown—475
Gravitation and inertial mass, Harry Lustig—820
Gravitational perturbation effects on the orbit of a near earth satellite, David Bender—755(A)
Gyroscope, Harry F. Newhall—78
Half-life of a water column as a laboratory exercise in exponential decay, J. R. Smithson and E. R. Pinkston—740
Hula hoop: An example of heteroparamagnetic excitation, T. K. Caughey—104
Magnetically coupled oscillating system, Fidel Alsina Fuertes—744
Method of virtual work for some problems in physics, Surendra Nath Srivastava—299
Misconception concerning the dynamics of the impact ball apparatus, Seville Chapman—705
Modern problems in fluid dynamics, Raymond J. Emrich—759(A)
Momentum conservation laws in Newtonian and canonical formalisms, William Frank and George L. Trigg—315
Momentum in Newtonian and Lagrangian formalisms, A. W. Solbrig, Jr.—680
Orbit to the sun, Eugene Feenberg—497
Pendulum parametric amplifier, Harry E. Stockman—506
Physics in auto accidents, George Barnes—498
Physics in outo accidents, George Barnes—754(A)
Practical and theoretical aspects of a compound pendulum, Michael Svonavec—413(A)
Reply to Lustig's Comments, G. Burniston Brown—820
Similarity solutions in fluid-gas dynamics, S. F. Borg—336
Simple electronic clock for the study of freely falling bodies, G. Giacomelli—817
Some "friction-free" demonstrations, D. D. Snyder and H. D. Nine—76
Subharmonic oscillations in Melde's experiment, William Pong—366
Suspended balloon: An empirical deduction of Archimedes' principle, William T. Achor—166
Self-energy and stability of the classical electron, F. Rohrlich—639
The tippy top, Frank F. Johnson—406(L)
An unmixing demonstration, John P. Heller—348

Mechanics, quantum

Application of the Rayleigh-Schrödinger perturbation theory to the delta function potential, Saul T. Epstein—495
Atomic beam measurement of nuclear properties, Leonard F. Goodman, 413(A)
Atomic term symbols by group theory, R. F. Curl, Jr. and John E. Kilpatrick—357
Correlation times, line widths, and cross relaxation of spin systems in solids, Jerome J. Kaplan—491
Deviations from equipartition of energy with nonquadriatic Hamiltonian, Anton Peterlin—716
Electron-nucleus hyperfine interaction in atoms, Richard A. Ferrell—484
Elementary-particle physics, Hugh Burkhardt—202
Hyperfine interaction and the Knight shift, Frederick J. Milford—521
Massless particles, R. H. Good—659
Model for atomic wavefunctions. J. C. Zorn and E. A. Zorn—676
Momentum space representation and photodistintegration of the deutron, Kiu S. Suh—327
On the uncertainty principle, Steven W. Matthysse—560
Optical pumping, Robert de Zafra—646
Partition function of an atom in a spherical box, Robert M. Mazo—332
Professor Landé on the reduction of the wave packet, P. K. Feyerabend—507(L)
Search for a fundamental length in microscopic physics, William A. McKinley—129
Simple derivation of the Clebsch-Gordan coefficients, R. T. Sharp—116
Some exact solutions of the time-dependent Schroedinger equation, Vernon W. Myers—114
Theory of superconductivity, Leon N. Cooper—91
Uncertainty principle and relativity, Bennett Kivel—404(L)
Virtual binding and its relation to resonance scattering, George L. Trigg—711

Mechanics, statistical

Apparatus drawings project. Simple kinetic theory demonstration, Robert G. Marcley—666
Collision term in the Boltzmann equation, Edward A. Desloge and Steven W. Matthysse—1
Deviations from equipartition of energy with nonquadriatic Hamiltonian, Anton Peterlin—716
On the validity of Kirchoff's law for a freely radiating body, M. A. Weinstein—123
Partition function of an atom in a spherical box, Robert M. Mazo—332
Well-informed heat engine: Efficiency and maximum power, C. Finfgeld and S. Machlup—324

Microwaves

Apparatus drawings project. Bragg diffraction apparatus, Robert G. Marcley—415
Operation moon bounce, David R. Light—759(A)

Modern physics

Apparatus drawings project. Balmer series spectrum tube, Robert G. Marcley—35
Apparatus drawings project. Bragg diffraction apparatus, Robert G. Marcley—415
Apparatus drawings project. Small mass spectrometer, Robert G. Marcley—380
Apparatus drawings project. Versatile mass spectrometer, Robert G. Marcley—418
Cambridge electron accelerator, M. Stanley Livingston—760(A)
Correlation times, line widths, and cross relaxation of spin systems in solids, Jerome J. Kaplan—491
Demonstration beta spectrometer, George E. Bradley—165
Elementary-particle physics, Hugh Burkhardt—202
Electrical conductivity and thermoelectric power in ionic crystals, R. W. Christy—457
Electron-nucleus hyperfine interaction in atoms, Richard A. Ferrell—484
Heavy fragments from excited nuclei, Anthony Alumkal—753(T)
Introduction to soft x-ray spectroscopy, E. R. Pike—235
Magnetic quadrupole less calculations, J. G. Dardis—760(A)
Massless particles, R. H. Good—659
Modern periodic table suggesting quantum derivation, Kenneth McClelland—413(A)
Mössbauer effect, S. DeBenedetti—758(T)
Nuclear magnetic resonance of fluorine compounds, Joseph K. Lees—760(A)
Nuclear models, Riek van Wageningen—425
Nuclear physics laboratory, Howard C. Long—759(A)
Optical pumping, Robert L. de Zafra—646
Oscilloscope spectroscopy, J. Giordano and M. Natapoff—502
Paramagnetic resonance, R. A. Kamper—249
Power supply for the e/m experiment, R. W. Christy and W. P. Davis, Jr.—815

Rate meter construction project, William P. Davis, Jr.—559
Search for a fundamental length in microscopic physics, William A. McKinley—129
Simple parallel plate ionization chamber for the undergraduate nuclear physics laboratory, George E. Bradley—163
Some aspects of molecular physics, J. M. H. Levelt—193
Sophomore laboratory course in modern physics, Selma Brody—736
Status of particle physics, M. Stanley Livingston—760(A)
Study of Compton backscattering from materials with varying atomic numbers, Kenneth LaBaw—754(A)
Thermonuclear reactions, George P. Thomson—221
Undergraduate mass spectrometer, John W. Dewdney—452
Undergraduate Planck's constant experiment, Ralph Eno—754(A)
Use of the probability plot in gamma-ray spectroscopy, I. F. Boekelheide—754(A)
Virtual binding and its relation to resonance scattering, George L. Trigg—711

Nuclear physics
Associated particle detection—Neutron intensity determinations, R. C. Lamb and M. T. McEllistrem—761(T)
Atomic beam measurement of nuclear properties, Leonard F. Goodman—413(A)
Basic physics concepts involved in nuclear interactions, James Roberts—758(A)
Chemical heart demonstration as a dynamic nucleus model, Glenn F. Powers and Joseph E. Smith—561
Cross sections for the $Zn^{64}(n,p)Cu^{64}$; $Zn^{64}(n,2p)Zn^{63}$ reaction, B. D. Kern and F. Gabbard—760(T)
Demonstration beta spectrometer, George E. Bradley—165
Effects of gamma radiation on infrared detectors, John F. Ready—411(A)
Elementary-particle physics, Hugh Burkhardt—202
Erratum: Subcritical reactor as a college facility, Frank S. Dietrich—567
Erratum: Isotopic spin, J. P. Davidson—103
Gamma-ray counting efficiency calibration of a 3- × 3-in. NaI(Ti) scintillation spectrometer, R. L. Alexander and B. D. Kern—760(A)
Heavy fragments from excited nuclei, Anthony Alumkal—753(T)
Measurement of half-life, Wallace A. Hilton and Roger C. Crawford—743
Metallurgy in the development of atomic power, J. A. Sabato—228
Momentum space representation and photodisintegration of the deuteron, Kiu S. Sub—327
Mössbauer effect, S. DeBenedetti—758(T)
Nuclear models, Riek van Wageningen—425
Simple parallel plate ionization chamber for the undergraduate nuclear physics laboratory, George E. Bradley—163
Subcritical reactor as a college facility, Frank S. Dietrich—309
Thermonuclear reactions, George P. Thomson—221
Use of nuclear null-matrix in the study of hydrogen and carbon atoms in metal, S. S. Sidhu—413(A)
Virtual binding and its relation to resonance scattering, George L. Trigg—711

Particles, elementary
Cambridge electron accelerator, M. Stanley Livingston—760(A)
Elementary-particle physics, Hugh Burkhardt—202
Massless particles, R. H. Good—659
Status of particle physics, M. Stanley Livingston—760(A)

Philosophy of science
Gravitational and inertial mass, G. Burniston Brown—475
Nature of physics and its relation to other disciplines, George P. Thomson—187
On teaching the philosophy of physics, Raymond J. Seeger—384
Truth in physics, Paul F. Schmidt—24

Plasma physics
Thermonuclear reactions, George P. Thomson—221

Properties of matter
Change of a viscoelastic sphere to a torus by random impacts, W. F. Busse and F. C. Starr—19
Fluid column, Blake D. Mills, Jr.—353
Further comment on the interrelationship of physical quantities, K. G. McNeill—744
Influence of the environment on the wave transmission of energy: Resonance and relaxation, R. B. Lindsay—67
Interrelationship of physical quantities, K. G. McNeill—375
Is there an ideal crystal? Roland E. Dobbs—243
Metallurgy in the development of atomic power, J. A. Sabato—228
Porosity-measurement apparatus, F. B. Stumpf and F. J. Lukman—503
Projection demonstration—freezing by evaporation, Sheldon Brown—754(A)
Refinements in technique of making density measurements on small crystalline samples, Ralph O. Meyer—761(A)
Some aspects of molecular physics, J. M. H. Levelt—193
Theory of superconductivity, Leon N. Cooper—91

Reactors
Environmental radiation monitoring near a reactor power plant, Richard I. Weller—759(T)
Erratum: Subcritical reactor as a college facility, Frank S. Dietrich—567
Metallurgy in the development of atomic power, J. A. Sabato—228
Subcritical reactor as a college facility, Frank S. Dietrich—309
Thermonuclear reactions, George P. Thomson—221

Relativity
Certain matters in relation to the restricted theory of relativity, with special reference to the clock paradox and the paradox of the identical twins. I. Fundamentals, W. F. G. Swann—55
Certain matters in relation to the restricted theory of relativity, with special reference to the clock paradox and the paradox of the identical twins. II. Discussion of the problem of the identical twins, W. F. G. Swann—319
Controversy concerning time dilation, H. L. Armstrong—504
Eötvös experiment and the gravitational red shift, R. H. Dicke—344
Equivalence principle and red-shift measurements, Alfred Schild—778
Extending the Lorentz transformation by characteristic coordinates, Robert T. Jones—109
Further comment on the case of Mr. Doakes, A. J. C. Wilson—748
Inertia of energy, Eugene Feenberg—565
Invariance of charge and action, Jacob Futterman—509(L)
Note on the separation of relativistically moving rockets, Arthur A. Evett and Raold K. Wangsness—566
Note on Schiff's paper on relativity, H. Bondi and C. W. Kilmister 508(L)
Observation of length by a single observer, Roy Weinstein—607
On experimental tests of the general theory of relativity, L. I. Schiff—340
On the origins of the special theory of relativity, Gerald Holton—627
Radiation pressure on a rapidly moving surface, Richard Schlegel—687
Relativistic reaction systems and the asymmetry of time scales, K. L. Kowalski—487
Relativistic relations between mass, velocity, momentum, and kinetic energy, John W. Dewdney—562
Relativistic theory of the behavior of clocks, Ted Clay Bradbury—443
Rest mass of a free particle, Israel Reff—745
Search for a fundamental length in microscopic physics, William A. McKinley—129
Temporal reversal of events in restricted relativity, Carlton W. Berenda—799
Self-energy and stability of the classical electron, F. Rohrlich—639
Speed of light in flowing dispersive liquids, Arthur A. Evett and D. C. Fried—733
Uncertainty principle and relativity, Bennett Kivel—404(L)

Reports, announcements, and news
Alphonse R. Schmitt, S. J.—83
Apparatus notes: A new feature—567
Future meetings—496
Gamma-ray Standards available from the National Bureau of Standards—168
Joint mathematics—physics committee—83
Journal of Mathematical Physics—262
Lecture demonstration notes available—374
Molecular structure symposium—393
National Bureau of Standards accepts new prefixes—365
National science teachers association theme—Current science and the K-12 program—242
Pamphlets for students, American Institute of Physics—227
Post-use book reviews—424
Report of conference on the improvement of college physics courses, Francis W. Sears, Francis Bitter, Francis L. Friedman, Walter C. Michels, Frank Verbrugge, and Jerrold R. Zacharias—568
Reprints of apparatus reviews—449
Second printing of *Taylor memorial manual*, Ralph Hoyt Bacon—567
Statement of editorial policy—76
Summer institutes—1960—220
Thomas David Phillips—567
Wanted: Test items—501

Rockets
Electromagnetic radiation from extra terrestrial sources, Herbert Friedman—622
Fun in space, Lee A. DuBridge—719

Satellites
Flash period of 1958 Delta I, Percy H. Carr, Robert M. Stewart, Jr., and Joseph N. Senne—64
Fun in space, Lee A. DuBridge—719
Gravitational perturbation effects on the orbit of a near earth satellite, David Bender—755(A)
Orbit to the sun, Eugene Feenberg—497
Space science symposium, S. F. Singer—612

Secondary school physics
Advanced placement program in physics, Kenneth H. Moore—279
Advanced physics in a southern high school, Robert L. Price—412(A)
Content of high school physics courses, Bryan Swan, James Lucus, Edwin Schillinger, and Edward McNeil—759(A)
Creative thinking and experimenting, H. R. Crane—437
National science foundation sponsored summer program in science and mathematics for high school students, Robert H. Frost—754(A)
Pamphlets for students, American Institute of Physics—227
Physics and mathematics backgrounds of Indiana high school physics teachers, R. E. Winn and E. Gorham—755(T)
Secondary School physics: The Physical Science Study Committee, Gilbert C. Finlay—286
Visiting foreign staff project (V.F.S.P.) at Temple University, Elmer L. Offenbacher—173
Summer physics programs for gifted students, Chester F. Bass—746

Social and economic aspects of science
Fun in space, Lee A. DuBridge—719
Nature of physics and its relation to other disciplines, George P. Thomson—187
Physics in auto accidents, George Barnes—754

Solid-state physics
Apparatus drawings project. Bragg diffraction apparatus, Robert G. Marcley—415
Change of a viscoelastic sphere to a torus by random impacts, W. F. Busse and F. C. Starr—19
Comment on "Interrelationship of physical quantities," Jay A. Glasel—678
Correlation times, line widths, and cross relaxation of spin systems in solids, Jerome J. Kaplan—491
Electrical conductivity and thermoelectric power in ionic crystals, R. W. Christy—457
Electrical conductivity of semiconducting crystals as a function of pressure, J. C. Burckle and M. Schwartz—761(T)
Ferromagnetic resonance in thin films, Thomas D. Rossing—412(A)
Grain boundaries in semiconductors, Wallace Lindeman—412(T)
Hall effect of semiconducting crystals as a function of pressure, T. A. Zickel and M. Schwartz—761(T)
Hyperfine interaction and the Knight shift, Frederick J. Milford—521
Introduction to soft x-ray spectroscopy, E. R. Pike—235
Is there an ideal crystal? Roland E. Dobbs—243
Nuclear magnetic resonance detector suitable for undergraduate demonstrations and laboratories, Bailey Donnally—412(A)
Optical absorption band edge in thin Sb_2 Se_3 films, T. E. Johnson—761(A)
Paramagnetic resonance, R. A. Kamper—249
Prebreakdown pulses in stibnite, J. R. Davis—762(A)
Production of Bi_2S_3 and Bi_2O_3 samples for semiconducting studies, D. M. Mattox—761
Refinements in technique of making density measurements on small crystalline samples, Ralph O. Meyer—761(A)
Simple graphical method of drawing and interpreting parallel planes through a unit crystal cell for any given set of Miller indices, George B. Savitsky—12
Single-domain particles: New uses of old theorems, William Fuller Brown, Jr.—542
Some remarks on lattice thermal conductivity, D. K. C. MacDonald—551
Speculations on the switching effect in stibnite, Lee Gildart—761(A)
Theory of superconductivity, Leon N. Cooper—91
Thermal conductivity of bismuth sulfide, James M. Kline—761(A)
Use of nuclear null-matrix in the study of hydrogen and carbon atoms in metal, S. S. Sidhu—413(A)

Sound
Demonstration equipment for the Herschel divided tube experiment, D. S. Ainslie—77
Erratum: Simple experiment in ultrasonics, Harold Forstat—567
Influence of the environment on the wave transmission of energy: Resonance and relaxation, R. B. Lindsay—67
Measurement of velocity of sound from resonance in open pipes, D. S. Ainslie—167(L)
Sound absorption properties of flexible foams, Manuel Schwartz and George Ball—761(A)

Space Physics
Space science symposium, S. F. Singer—612

Teacher training
Experience as an NSF traveling science teacher, Esther A. Hand—413(A)
High school physics teachers—some statistics from the 1959 summer institute at North Dakota, Elliot Weinberg—412(A)
National Science Foundation institutes, Edward L. Haenisch—284
New graduate program for teachers at the state colleges, Monica Bainter—753(T)
On the education of physicists in three foreign countries, Albert M. Goldfarb—179
Recommendations for changes in the certification of high school teachers of physics and chemistry in Indiana, R. W. Lefler—755(T)
Summer institutes—1960—220
Training of secondary science teachers, Robert R. McFarland—816

Testing, theory and techniques
Advanced placement program in physics, Kenneth H. Moore—279
Nonsecret laboratory examinations, John W. Dewdney and Robert W. Christy—399

Testing for physics achievement, Frederick L. Ferris, Jr.—269
Wanted: Test items—501

Units, dimensions, and terminology
Consistent symbols in circuit diagrams, Francis T. Worrell—508(L)
Electrokinetic potential (ekp) vs electromotive force (emf), Schwab S. Major, Jr.—816
How many glugs in a mug? Francis W. Sears—167(L)
National Bureau of Standards accepts new prefixes—365
Note on force per unit charge, Francis T. Worrell—406(L)

Visual materials and methods
More effective teaching of physics through television, Harvey E. White—368
Purdue film experiment, D. J. Tendam—755(T)

X-rays
Experiments in x-ray physics using a commercial x-ray spectrometer, Leonard Muldawer—811
Introduction to soft x-ray spectroscopy, E. R. Pike—235
X-ray diffraction apparatus for the undergraduate laboratory, John Kalafut—759
